Developed and operated by the Center for Excellence and Equity in Mathematics, RSP offers special sections of MAT 0900 and MAT 0993. Patterned after Wayne State University’s highly acclaimed Emerging Scholars Program, an honors-level Calculus program, RSP stands on the very simple but powerful belief – that all students have a unique and special greatness within them and that, through hard work and with the support of a caring community, that greatness can be realized. Two principles follow:

1. High standards and high expectations should be held at all times for every student in the program.
2. A sense of community should exist within the program, where every student is cared about, supported and made to feel that he or she belongs to something special.

Program Description: RSP offers specially designated sections of MAT 0900 and MAT 0993, taught by highly trained instructors in a combined lecture-workshop format. Classes meet four days per week in a standard classroom setting and two days per week in a workshop, where the students work in groups to solve problems that are designed to elevate both their skills and understandings. Non-academic support and community building activities are provided by RSP’s Support Coordinators. RSP seeks students who are committed to success and willing to do the hard work necessary to reach their goals.

Policies and Expectations: It’s expected that the students in RSP sections will be committed to excellence, willing to work hard and supportive of each other’s educational goals and dreams. Accordingly, the following standards are held:
1. Students are expected to attend every class and workshop fully and on time.
2. No student is admitted into any class or workshop late.
3. Students are expected to submit all homework assignments in a satisfactory and timely manner.

To Register:
1. Complete the online application at: http://forms.wayne.edu/51374da353a86.
2. Register for the class. Your advisor can provide an override if needed.
